INDEX TO VOLUME XXVI

Ahmad, Shafaat. *On implicational completeness*, 761–768
Allegretto, W. *Oscillation criteria for quasi-linear equations*, 931–947
Anderson, Joel. *On compact perturbations of operators*, 247–250
Applebaum, C. H. *Counterexamples in the theory of ω-functions*, 800–805
Arad, Zvi. *A characteristic subgroups of v-stable groups*, 1509–1514

Baxter, J. R. and Chacon, R. V. *A local ergodic theorem on L_p*, 1206–1216
Beachy, John A. *Bicommutators of cofaithful, fully divisible modules: Corrigendum*, 256
Beineke, L. W. and Pippert, R. E. *Enumerating dissectible polyhedra by their automorphism groups*, 50–67
Benabdallah, Khalid and Irwin, John. *Pure N-high subgroups, P-adic topology and direct sums of cyclic groups*, 322–327
Benedetto, John J. *Pseudo-measure energy and spectral synthesis*, 985–1001
Berger, T. R. *Hall Higman type theorems, I*, 513–531
Blanchard, Andrew A. *Structure species and constructive functors*, 1217–1227
Bleier, Roger D. *The SP-hull of a lattice-ordered group*, 866–878
Bourgin, D. G. *A generalization of the mapping degree*, 1109–1117
Brungs, H. H. *Right invariant right hereditary rings*, 1186–1191
Buckhiester, Philip G. *Rank r solutions to the matrix equation $XAX^T = C$, A nonalternate, C alternate, over $GF(2y)$*, 78–90
Burroughs, John. *Operations in Grothendieck rings and the symmetric group*, 543–550
Bustoz, Joaquin. *On the relation between $[f, g]$ and A_λ summability*, 783–793
Butler, G. and Macki, J. W. *Oscillation and comparison theorems for second order linear differential equations with integrable coefficients*, 294–301
Butler, Jean W. *A generation procedure for the simple 3-polytopes with cyclically 5-connected graphs*, 686–708
Butler, P. H. and King, R. C. *Symmetrized Kronecker products of group representations*, 328–339

Carson, Andrew B. *Algebraically closed regular rings*, 1036–1049
Chacon, R. V. and Baxter, J. R. *A local ergodic theorem on L_p*, 1206–1216
Chang, Bai Ching. *Which abelian groups can be fundamental groups of regions in Euclidean spaces?*, 7–18
Chen, Yi. *A characterization of some geometries of chains*, 257–272
Chong, Kong-Ming. *Some extensions of a theorem of Hardy, Littlewood and Pólya and their applications*, 1321–1340
Choudhary, B. and Kumar, Ashok. *An extension of M. Riesz's mean value theorem for infinite integrals*, 1016–1024
Cima, J. A. and Wogen, W. R. *On algebras generated by composition operators*, 1234–1241
Colwell, Peter. *Improved versions of forms of Plessner's theorem*, 251–255
Conrad, Paul. *The additive group of an f-ring*, 1157–1168

Dauns, John. *The primitive ideal space of a C^*-algebra*, 42–49
Davis, Chandler and Rosenthal, Peter. *Solving linear operator equations*, 1384–1389
Dawson, Jeffrey and Dobbs, David E. *On going down in polynomial rings*, 177–184
de Vries, E. and van Zanten, A. J. *On the number of classes of a finite group invariant for certain substitutions*, 1090–1097
Dietze, Anke and Schaps, Mary. *Determining subgroups of a given finite index in a finitely presented group*, 769–782
Dobbs, David E. and Dawson, Jeffrey. *On going down in polynomial rings* 177–184
Dubois, D. and Efroymson, G. *A dimension theorem for real primes*, 108–114
Dubois, Jacques. *A note on the van der Waerden permanent conjecture*, 352–354
Dubrovsky, Diana L. *Some subfields of Q_p and their non-standard analogues*, 473–491

Dunkl, Charles F. and Ramirez, Donald E. *Operators on a Fourier algebra with weakly compact extensions*, 450–454
Duran, J. Peter. *Almost convergence, summability and ergodicity*, 372–387

Edwards, Gordon. *Primitive elements in symmetric algebras*, 355–364
Efroymson, G. and Dubois, D. *A dimension theorem for real primes*, 108–114
Elliott, George A. *Some C^*-algebras with outer derivations, II*, 185–189

Farnum, Nicholas R. *The Banach-Saks theorem in $C(S)$*, 91–97
Feustel, C. D. *On embedding essential annuli in M^3*, 1341–1350
Fisher, R. K. *The polycyclic length of linear and finite polycyclic groups*, 1002–1009
Fixman, Uri and Zorzitto, Frank A. *A purity criterion for pairs of linear transformations*, 734–745
Fontenot, Robert A. *Strict topologies for vector-valued functions*, 841–853
Formanek, Edward. *The type I part of the regular representation*, 1086–1089
Freud, G. and Sharma, A. *Some good sequences of interpolatory polynomials*, 233–246

Gallian, Joseph A. *Finite p-groups with homocyclic central factors*, 636–643
Gazil, R. J. *Regularity of Richardson's compactification*, 1289–1293
Gittings, Raymond F. *Some results on weak covering conditions*, 1153–1156
Goebel, K.; Kirk, W. A. and Thele, R. L. *Uniformly Lipschitzian families of transformations in Banach spaces*, 1245–1256
Gomory, R. E.; Hu, T. C. and Yohe, J. M. *R-separating sets*, 1418–1429
Goodaire, Edgar G. *Irreducible representations of algebras*, 1118–1129
Gopinath, B. and Kurshan, R. P. *Recursively generated periodic sequences*, 1356–1371
Grabiner, Sandy. *Ranges of products of operators*, 1430–1442
Griffin, Malcolm. *Valuations and Prufer rings*, 421–429
——— *Multiplication rings via their total quotient rings*, 430–449
Griffiths, R. C. *Permanents of random doubly stochastic matrices*, 600–607
Gupta, Narain; Levin, Frank and Rhemtulla, Akbar. *Chains of varieties*, 190–206

Haley, David K. *A note on compactifying artinian rings*, 580–582
Halpern, Herbert. *Mackay Borel structure for the quasi-dual of a separable C^*-algebra*, 621–628
Herrlich, Horst. *Regular categories and regular functors*, 709–720
Herstein, I. N. *On rings with involution*, 794–799
Hill, Paul. *On the splitting of modules and abelian groups*, 68–77
Hinton, Don. *Limit point criteria for differential equations, II*, 340–351
Hoel, C. *Pseudodifferential resolvent for a certain non-locally-solvable operator*, 1130–1140
Hu, T. C.; Yohe, J. M. and Gomory, R. E. *R-separating sets*, 1418–1429

Irwin, John and Benabdallah, Khalid. *Pure N-high subgroups, P-adic topology and direct sums of cyclic groups*, 322–327

Jung, Fuanglada R. *On conics over a finite field*, 1281–1288

Karrass, A.; Pietrowski, A. and Solitar, D. *An improved subgroup theorem for HNN groups with some applications*, 214–224
Karvellas, P. H. *Additive divisibility in compact topological semirings*, 593–599
Kelly, David and Rival, Ivan. *Crowns, fences, and dismantlable lattices*, 1257–1271
King, R. C. and Butler, P. H. *Symmetrized Kronecker products of group representations*, 328–339
Kirk, W. A.; Thele, R. L. and Goebel, K. *Uniformly Lipschitzian families of transformations in Banach spaces*, 1245–1256
Kon, Masahiro. *On some complex submanifolds in Kaehler manifolds*, 1442–1449
Kumar, Ashok and Choudhary, B. *An extension of M. Riesz's mean value theorem for infinite integrals*, 1016–1024
Kurshan, R. P. and Gopinath, B. *Recursively generated periodic sequences*, 1356–1371

Lembek, J. and Michler, G. *Localization of right Noetherian rings at semiprime ideals*, 1069–1085
Lanski, Charles. *Homomorphisms of rings with involution*, 1098–1108

GENERAL DUPLICATING CO.
75 1678A 013 S 5019
QUALITY CONTROL MARK

Larman, D. G. *On the selection of compact subsets of positive measure from analytic sets of positive measure*, 665–677
Leach, Ronald J. *On odd functions of bounded boundary rotation*, 551–564
——— *Coefficients of symmetric functions of bounded boundary rotation*, 1351–1355
Lebensold, Kenneth W. *Extrema of a class of functions on a finite set*, 806–819
Lee, C. Y. *Invariant polynomials of Weyl groups and applications to the centres of universal enveloping algebras*, 583–592
Levin, Frank; Rhemtulla, Akbar and Gupta, Narain. *Chains of varieties*, 199–206
Lin, C.-S. *On a family of generalized numerical ranges*, 678–685
Lindner, Charles C. *Construction of Steiner triple systems having exactly one triple in common*, 225–232
Longstaff, W. E. *Generators of unit algebras*, 565–575
Losey, Gerald. *N-series and filtrations of the augmentation ideal*, 962–977
Lund, Bruce. *Ideals and subalgebras of a function algebra*, 405–411

McCandless, W. L. *Existence theorems for non-linear boundary value problems*, 884–892
Macedonska-Nosalska, O. N. *A note on associative polyverbal operations on groups*, 1450–1454
Macki, J. W. and Butler, G. *Oscillation and comparison theorems for second order linear differential equations with integrable coefficients*, 294–301
Magill, K. D., Jr. and Subbiah, S. *Green's relations for regular elements of semi-groups of endomorphisms*, 1484–1497
Majindar, Kulendra N. *An arithmetical difference system with application to B.I.B. designs*, 1466–1474
Malkey, Donald J. *Topological properties of limits of inverse system of measures*, 1455–1465
Mann, L. N. *Highly symmetric homogeneous spaces*, 291–293
Marsden, M. J. and Riemenschneider, S. D. *Korovkin theorems for integral operators with kernels of finite oscillation*, 1390–1404
Marshall, Murray A. *Ramification theory for valuations of arbitrary rank*, 908–916
——— *The Nakayama map and ramification for maximally complete fields*, 917–919
Maxwell, J. W. *Regular neighborhoods of immersed manifolds*, 1480–1483
Michler, G. and Lambek, J. *Localization of right Noetherian rings at semiprime ideals*, 1069–1085
Milner, E. C. and Shelah, S. *Sufficiency conditions for the existence of transversals*, 948–961
Minda, Carl David. *Capacity estimates for planar Cantor-like sets*, 1169–1172
Montador, Bruce. *Le spectre des opérateurs de composition sur C[0, 1]*, 1199–1205
Montgomery, Susan. *Rings with involution in which every trace is nilpotent or regular*, 130–137
Mott, Joe L. *Convex directed subgroups of a group of divisibility*, 532–542
Muldowney, J. S. and Willett, D. *An intermediate value property for operators with applications to integral and differential equations*, 27–41
Müller, Bruno J. *The structure of quasi-Frobenius rings*, 1141–1151
Myung, Hyo Chul. *A class of almost commutative nilalgebras*, 1192–1198

Nagel, Alexander and Rudin, Walter. *Riesz decompositions*, 753–760

Oberle, Richard Alan. *A note on equicontinuous families of volumes with an application to vector measures*, 273–280
——— *Characterization of a class of equicontinuous sets of finitely additive measures with an application to vector valued Borel measures*, 281–290

Paschke, William L. *The double B-dual of an inner product module over a C*-algebra B*, 1272–1280
Pearcy, Carl and Salinas, Norberto. *Operators with compact self-commutator*, 115–120
Pelletier, Donald H. *Easton's results via iterated Boolean-valued extensions*, 820–828
Petrich, Mario. *The translational hull of a semilattice of weakly reductive semigroups*, 1520–1536
Phadke, B. B. *Products of transvections*, 1412–1417
Pietrowski, A.; Solitar, D. and Karrass, A. *An improved subgroup theorem for HNN groups with some applications*, 214–224
Pippert, R. E. and Beineke, L. W. *Enumerating dissectible polyhedra by their automorphism groups*, 50–67
Platt, Craig. *Iterated limits of lattices*, 1301–1320
Puttaswamaiah, B. M. *Determination of Brauer characters*, 746–752

Radjabalipour, Mehdi. *Growth conditions and decomposable operators*, 1372–1379
Ramirez, Donald E. and Dunkl, Charles F. *Operators on a Fourier algebra with weakly compact extensions*, 450–454
Redfield, R. H. *Ordering uniform completions of partially ordered sets*, 644–664
Reed, G. M. *On continuous images of Moore spaces*, 1475–1479
Reilly, N. R. *The translational hull of an inverse semigroup*, 1050–1068
Rhemtulla, Akbar; Gupta, Narain and Levin, Frank. *Chains of varieties*, 190–206
Riemenschneider, S. D. and Marsden, M. J. *Korovkin theorems for integral operators with kernels of finite oscillation*, 1390–1404
Rival, Ivan and Kelly, David. *Crowns, fences, and dismantlable lattices*, 1257–1271
Rolfsen, Dale. *Some counterexamples in link theory*, 978–984
Rosenthal, Peter and Davis, Chandler. *Solving linear operator equations*, 1384–1389
Rubin, Robert A. *Semi-simplicity relative to kernel functors*, 1405–1411
Ruckle, William H. *On the classification of biorthogonal sequences*, 721–733
Rudin, Walter and Nagel, Alexander. *Riesz decompositions*, 753–760
Rummler, Hansklaus. *On Gaussian and geodesic curvature of Riemannian manifolds*, 629–635
Rush, David E. *The G-function of Macrae*, 854–865

Salinas, Norberto and Pearcy, Carl. *Operators with compact self-commutator*, 115–120
Schaps, Mary and Dietze, Anke. *Determining subgroups of a given finite index in a finitely presented group*, 769–782
Scheinberg, Stephen. *Homomorphism and isomorphism of abelian groups*, 1515–1519
Schelter, William. *Topological rings of quotients*, 1228–1233
Schultz, Reinhard. *A generalization of Thom classes and characteristic classes to nonspherical fibrations*, 138–144
Shah, S. M. and Trimble, S. Y. *Entire functions with some derivates univalent*, 207–213
Shapiro, Joel H. *On the weak basis theorem in F-spaces*, 1294–1300
Sharma, A. and Freud, G. *Some good sequences of interpolatory polynomials*, 233–246
Sharma, Sneh. *A bound for the degree of $H^1(G, Z_p)$*, 1010–1015
Shelah, S. and Milner, E. C. *Sufficiency conditions for the existence of transversals*, 948–961
Sheldon, Philip B. *Prime ideals in GCD-domains*, 98–107
Shephard, G. C. *Combinatorial properties of associated zonotopes*, 302–321
Sherif, Soraya. *Absolute Tauberian constants for Hausdorff transformations*, 19–26
Shores, Thomas S. and Wiegand, Roger. *Some criteria for Hermite rings and elementary divisor rings*, 1380–1383
Singh, Surjeet. *Quasi-injective and quasi-projective modules over hereditary Noetherian prime rings*, 1173–1185
Solitar, D.; Karrass, A. and Pietrowski, A. *An improved subgroup theorem for HNN groups with some applications*, 214–224
Specht, William. *Isomorphic subgroups of finite p-groups revisited*, 576–579
Subbiah, S. and Magill, K. D., Jr. *Green's relations for regular elements of semi-groups of endomorphisms*, 1484–1497

Tall, Franklin D. *On the existence of normal metacompact Moore spaces which are not metrizable*, 1–6
Taylor, Peter D. *Some open sets for which the heat equation is simplicial*, 455–472
Thele, R. L.; Goebel, K. and Kirk, W. A. *Uniformly Lipschitzian families of transformations in Banach spaces*, 1245–1256
Thron, W. J. and Warren, R. H. *The family of Lodato proximities compatible with a given topological space*, 388–404
Toubassi, E. H. *The group of extensions and splitting length*, 879–883
Trimble, S. Y. and Shah, S. M. *Entire functions with some derivates univalent*, 207–213
Tutte, W. T. *Chromatic sums for rooted planar triangulations, V: special equations*, 893–907

van Zanten, A. J. and de Vries, E. *On the number of classes of a finite group invariant for certain substitutions*, 1090–1097

Ware, Roger. *A note on quadratic forms and the u-invariant*, 1242–1244
Warren, R. H. and Thron, W. J. *The family of Lodato proximities compatible with a given topological space*, 388–404
Wasileski, J. S. *Compactifications*, 365–371

Weinstein, J. *Large matchings in graphs*, 1498–1508
Wells, Robert. *Double covers and metastable immersions of spheres*, 145–176
Wiegand, Roger and Shores, Thomas S. *Some criteria for Hermite rings and elementary divisor rings*, 1380–1383
Willett, D. and Muldowney, J. S. *An intermediate value property for operators with applications to integral and differential equations*, 27–41
Williams, J. J. *Non-isomorphic tensor products of von Neumann algebras*, 492–512
Wilson, Jeremy. *On outer-commutator words*, 608–620
Wogen, W. R. and Cima, J. A. *On algebras generated by composition operators*, 1234–1241
Woods, R. Grant. *Zero-dimensional compactifications of locally compact spaces*, 920–930
Woods, S. M. *Some results on semi-perfect group rings*, 121–129

Yohe, J. M.; Gomory, R. E. and Hu, T. C. *R-separating sets*, 1418–1429

Zakon, Elias. *Model-completeness and elementary properties of torsion free abelian groups*, 829–840
Zaks, Joseph. *The maximum genus of Cartesian products of graphs*, 1025–1036
Zorzitto, Frank A. and Fixman, Uri. *A pari criterion for pairs of linear transformations*, 734–745
